Scoring Directions

1. Sum the number of check marks placed in items 1 through 25. Use the following scale to interpret the final number.

1 to 8 = You may or may not have a problem with your sexual behavior on the Internet. You are in a low risk group, but if the Internet is causing problems in your life, seek a professional who can conduct further assessment.

9 to 18 = You are "at-risk" for your sexual behavior to interfere with significant areas of your life. If you are concerned about your sexual behavior online, and you have noticed consequences as a result of your online behavior, it is suggested that you seek a professional who can further assess and help you with your concerns.

19 + = You are at highest risk for your behavior to interfere and jeopardize important areas of your life (social, occupational, educational, etc.). It is suggested that you discuss your online sexual behaviors with a professional who can further assess and assist you.

2. Items 26 through 34 are an abbreviated version of the Sexual Addiction Screening Test (SAST). These items should be reviewed for general sexual addiction behavior, not specifically for cybersex. Although there is no cutoff scores calculated for these items, a high score on items 1 through 25 paired with a high number of items in 26 through 34 should be seen as an even greater risk for sexual acting out behavior on the Internet.

** Please note: Items 26 through 34 should not be calculated in the total score for part 1.

3. No item alone should be an indicator of problematic behavior. You are looking for a constellation of behaviors, including other data, that may indicate the client is struggling with their Internet sexuality. For example, it would not be unusual to have sexual sites bookmarked, or to have searched for something sexual online, but paired with other behaviors, it may be problematic.
